

HealthBridge - Application Screenshots & Overview

High-Fidelity Flutter Implementation | Mobile Developer Assessment

Assessment Summary: This application provides a high-fidelity Flutter implementation of the **HealthBridge** healthcare appointment platform based on the provided Figma design. It implements local JSON authentication, dynamic doctor data loading via `ListView.builder` (FlatList equivalent), interactive date & time slot selection, data passing across navigation stack, and a booking confirmation flow.

React Native → Flutter Technology Mapping

React Native requirement	Flutter implementation	Notes
Functional Components	<code>StatelessWidget</code> / <code>StatefulWidget</code>	Component-based architecture
React Hooks	<code>State</code> , <code>useState</code> , <code>setState</code>	Flutter state management
React Navigation	<code>Navigator</code> / <code>MaterialPageRoute</code>	Stack navigation
FlatList	<code>ListView.builder</code>	Efficient list rendering
Local JSON	<code>rootBundle.loadString</code>	JSON stored as Flutter assets
Reusable Components	Custom Flutter widgets	Shared UI components

Application Screenshots

Figure 1: Figma Design Screens - Home Screen, About Doctor Screen, and Appointment Confirmation Screen.

Screen	Key Features & Implementation	Data Source
1. Login Screen	User authentication form with Email/Username & Password validation, error state feedback, quick-fill demo chips, and smooth transition.	<code>assets/data/users.json</code>
2. Home Screen	Doctor listing via <code>ListView.builder</code> with real-time search, category filter pills, doctor cards with ratings & next slot info, Urgent Care Wait Times banner, bottom navigation bar.	<code>assets/data/doctors.json</code>
3. About Doctor Screen	Full doctor profile header, badges, bio, expertise chips, date selector strip, time slot choice grid, call front desk banner, location card with map graphic, scorecard, sticky Book Appointment button.	Passed <code>DoctorModel</code>
4. Confirmation Screen	Booking confirmed checkmark badge, summary card with selected date/time/location, fee breakdown (\$0.00 total due), Google Calendar & SMS reminder toggles, Done button.	Passed <code>AppointmentModel</code>

Deliverables & Build Verification

- **Flutter Project Path:** C:\AI-am\app\alamgir\speegile_assignment
- **Android Debug APK (for Testing):** build/app/outputs/flutter-apk/app-debug.apk
- **Documentation:** Detailed README.md including technology mapping notes and setup instructions.

- **Static Analysis & Unit Tests:** flutter analyze passed with 0 errors; flutter test passed all model & data serialization tests.
